

@HOWTOPROMPTSCOM · FREE GUIDE

5 GitHub repos that feel **illegal** to know.

All free. All open source. What each one does, the link, how to install it, and what to watch out for.

5

RemoveMacAI

Turn off Apple Intelligence on your Mac

★ 3.9K

4

Universal Modder

Your AI agent mods the PC games you own

★ 6.1K

3

Strata

A 125B-parameter AI on your gaming PC

★ 19.9K

2

OpenClaw

An AI assistant you text, running on your machine

★ 392K

1

PhotoCraft

A free, open-source Photoshop alternative

★ 37.1K

5

RemoveMacAI

macOS

github.com/omlahore/RemoveMacAI

Debloats macOS: turns off Apple Intelligence and deletes its models, stops analytics and ads, quiets the pop-ups and gets your disk space back. Every change is shown first and can be undone.

INSTALL

Download RemoveMacAI.zip from the repo's latest release, unzip, drag it to Applications.

4

Universal Modder

Windows / WSL

github.com/rehan-remade/universal-modder

Skills and tools that let an AI coding agent (Claude Code, Codex, Cursor, Gemini CLI...) mod almost any PC game you own: it finds the engine, reads the code, builds the mod and tests it in the running game.

INSTALL IN CLAUDE CODE

```
/plugin marketplace add rehan-remade/universal-modder
/plugin install universal-modder@universal-modder
```

TRY

Mod Terraria: add a homing missile launcher.

Needs Git, Python 3.10+ and ffmpeg. Generated art uses a fal API key (paid) or a local ComfyUI. Only mod single-player games you own.

3

Strata

Windows / Linux

github.com/Niko1221/Strata

Runs Qwen3.8-Flash-Next, a 125-billion-parameter model, on a normal gaming PC. It chats, writes code and reads images, and nothing leaves your computer.

You need an NVIDIA RTX 20–50 series or a supported AMD card with 12 GB+ VRAM, 32 GB+ RAM and ~80 GB of free disk. Check the README's "What you need" table first.

2

OpenClaw

Mac · Windows · Linux

github.com/openclaw/openclaw

An open-source AI assistant that runs on your own computer and talks to you where you already chat: WhatsApp, iMessage, Telegram, Slack, Discord and 20+ more. You plug in the model (Claude, Codex or a local one).

INSTALL (MACOS / LINUX)

```
curl -fsSL https://openclaw.ai/install.sh | bash
```

It can act on your computer, so give it only the access it needs, and only install community skills you've read.

1

PhotoCraft

early alpha

github.com/storytold/photocraft

A clean-room, open-source Photoshop alternative written in Rust: layers, masks, adjustment layers, type, brushes and real PSD files. Same team also builds FilmCraft (video), LightCraft (photos), VectorCraft (vector) and PdfCraft.

INSTALL

```
getartcraft.com/apps/photocraft (macOS, Windows, Linux, web)
```

Early alpha: great to try, but keep Photoshop for client work until it matures.
